

Add templates folder

Add calc.html file

Add templates path in settings.py of the main project

```
ROOT_URLCONF = 'LAB_1.urls'

TEMPLATES = [
    {
        'BACKEND': 'django.template.backends.django.DjangoTemplates',
        'DIRS': [os.path.join(BASE_DIR, 'templates')],
        'APP_DIRS': True,
        'OPTIONS': {
            'context_processors': [
                'django.template.context_processors.debug',
                'django.template.context_processors.request',
```

Calc.html

```
urls.py firstapp 2 | views.py 3 | calc.html x | settings.py | tests.py 1 | urls.py LAB_1 |
templates > <> calc.html > html > body
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta http-equiv="X-UA-Compatible" content="IE=edge">
6      <meta name="viewport" content="width=device-width, initial-scale=1.0">
7      <title>Document</title>
8  </head>
9  <body>
10     Hello this is calc page.
11 </body>
12 </html>
```

Code for firstapp/views.py

```
views.py > home
2 from django.http.response import HttpResponseRedirect
3 from django.shortcuts import render
4 from django.http import HttpResponseRedirect
5 # Create your views here.
6
7 def home(request):
8     #return HttpResponseRedirect("Hello World");
9
10    return render(request, 'calc.html')
```

- Now we will convert `calc.html` into a form which accepts two numbers and displays sum.
- We will also add corresponding code in the `firstapp/views.py`

Calc.html

```
<? calc.html > <? html>
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
</head>
<body>
  <form action="add" method="post">
    {% csrf_token %}
    Enter 1st Number : <input type="text" name="num1"><br>

    Enter 2nd Number : <input type="text" name="num2"><br>

    <input type="submit">
  </form>
</body>
</html>
```

Firstapp/views.py

```
views.py / add
from django.http.response import HttpResponseRedirect
from django.shortcuts import render
from django.http import HttpResponseRedirect
# Create your views here.

def home(request):
    #return HttpResponseRedirect("Hello World");

    return render(request, 'calc.html')

def add(request):
    val1=request.POST['num1']
    val2=request.POST['num2']
    res=int(val1)+int(val2)
    return render(request, 'result.html', {'result':res})
```

Result.html

```
> result.html > html > body
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
</head>
<body>
  Result is : {{result}}
</body>
</html>
```

Firstapp/urls.py

```
urls.py > ...  
from django.urls import path  
from django.urls.resolvers import URLPattern  
  
from . import views  
  
urlpatterns=[  
    path('', views.home, name='home'),  
    path('add', views.add, name='add')  
]
```

Adding CSS in django

Existing project

- It is assumed that you have already set up a project with template folder.
- Your project contains one app and corresponding view and URL files are updated properly.

✓ MYPROJECT

✓ firstapp

> __pycache__

> migrations

🔌 __init__.py

🔌 admin.py

🔌 apps.py

🔌 models.py

🔌 tests.py

🔌 urls.py

🔌 views.py

✓ myproject

> __pycache__

🔌 __init__.py

🔌 asgi.py

🔌 settings.py

🔌 urls.py

🔌 wsgi.py

✓ templates

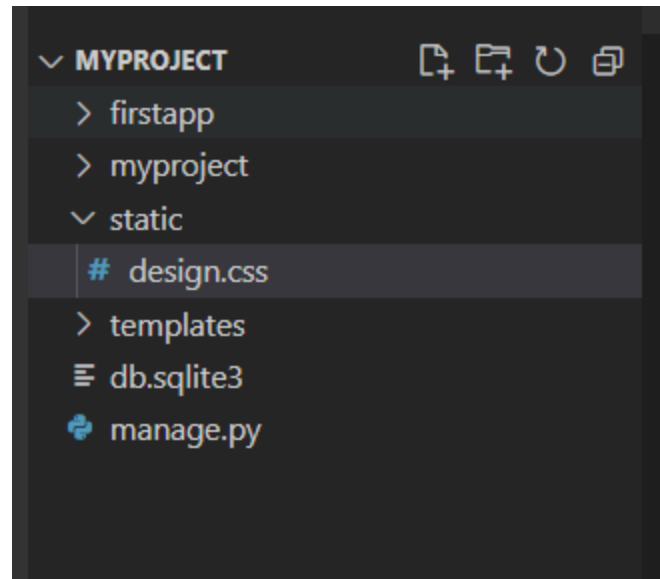

<> home.html

≡ db.sqlite3

🔌 manage.py

Create static folder

- Add 'static' folder in the root directory and create a file 'design.css' in static folder.

Css file content

```
static > # design.css > ...
1  body{
2      background-color: ■ lavender;
3      text-align: center;
4  }
5      h2{
6          font-style: italic;
7          size: 30px;
8          color: ■ #f08080;
9      }
10     p{
11         font-size: 20px;
12     }
13
14     .blue{
15         color: ■ blue;
16     }
17     .red{
18         color: ■ red;
19     }
20     .green{
21         color: ■ green;
22     }
23
```

Home.html file content

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>My Web Page</title>
</head>
<body>
  <h2>Hello world</h2>
  <p>Lorem ipsum dolor sit amet consectetur adipisicing elit.
    Esse eveniet corrupti dolorum, minus voluptatum magni
    facilis, veniam earum maiores perspiciatis accusantium
    fuga impedit laudantium. Adipisci cumque laboriosam
    quibusdam similique architecto.</p>
</body>
</html>
```

Go to main project's settings.py file and add your app name in INSTALLED_APPS section

```
INSTALLED_APPS = [  
    'django.contrib.admin',  
    'django.contrib.auth',  
    'django.contrib.contenttypes',  
    'django.contrib.sessions',  
    'django.contrib.messages',  
    'django.contrib.staticfiles',  
    'firstapp',  
]
```

In the settings.py file, add below code above the STATIC_URL section

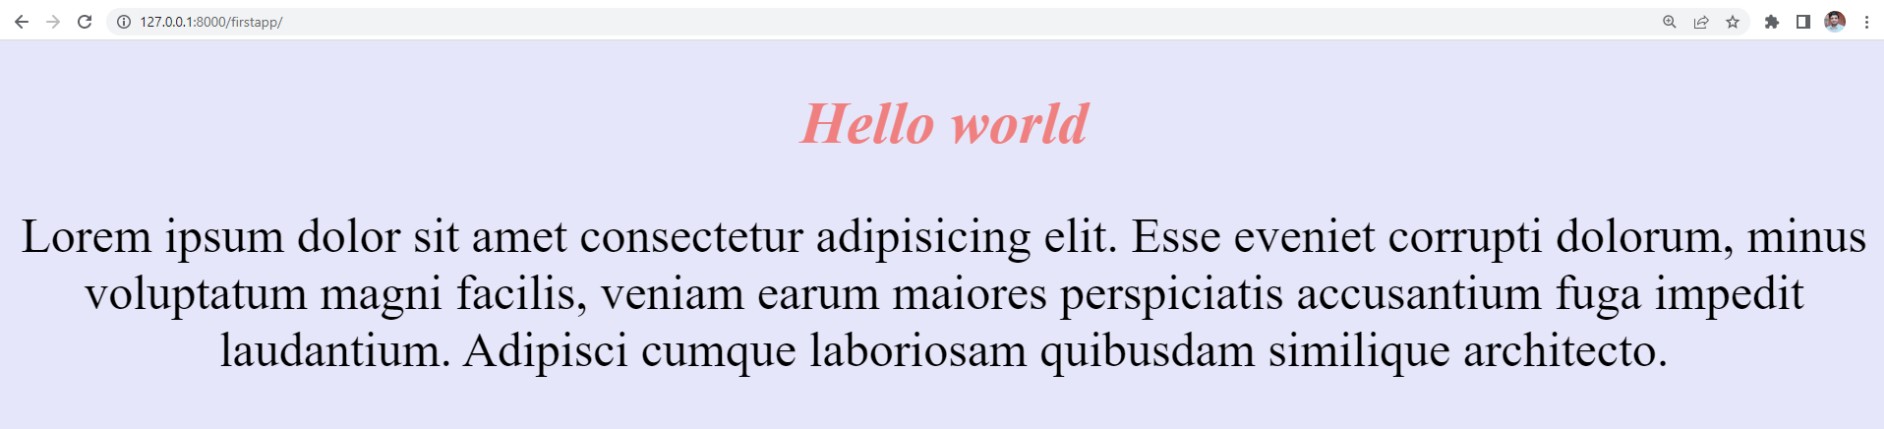

```
# Static files (CSS, JavaScript, Images)
# https://docs.djangoproject.com/en/4.1/howto/static-files/

STATICFILES_DIRS = [
    os.path.join(BASE_DIR, 'static')
]
STATIC_URL = 'static/'
```

Now link the stylesheet file in home.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>My Web Page</title>
  {% load static %}
  <link rel="stylesheet" href="{% static 'design.css' %}">
```

Save all files and run the server

- In the similar way, static files like images, css, javascripts can be loaded.
